

Additional Narratives

Terminating Medical Group: **UCSD Medical Group**

Pending Termination Date: **July 1, 2026**

- The Plan confirms the following:
 - This pending termination will affect Point of Service (POS) enrollees; however, POS members represent only 1% of the total enrolled population.
 - The receiving provider groups have admitting privileges to in-network hospitals.
 - The Plan intends to send an Enrollee Notice to all Plan enrollees assigned to the Terminating Medical Group.
 - The Plan has neither issued nor received any contract termination notices to/from the receiving groups that would result in termination within the next six months.
 - One of the receiving provider groups (Mercy Physician Medical Group) will receive 38 enrollees who will travel 28 miles from the current PCP office to the new PCP office. However, the distance from the residence address to the new PCP office is less than 28 miles (approximately 17–27 miles) for 13 out of 38 enrollees. The Plan conducted a comprehensive review of all contracted PCPs within a 15-mile radius. No providers meeting network participation, panel availability, and scope-of-practice requirements were available at the time of reassignment. As the termination date approaches, the Plan will conduct additional reviews to determine whether more appropriate PCPs located within the 15-mile radius become available and will reassign members accordingly.
 - All services provided by the Terminating Medical Group will be available through the Receiving Provider Groups at an in-network benefit level
 - The Plan has not sent or received a notice of contract termination to/from any of the Receiving Provider Groups' primary hospitals
 - There are no inpatient or outpatient hospital-based services available to affected enrollees through the Terminating Medical Group that would not be available through any of the Receiving Provider Groups.
 - Each Receiving Provider Group has the necessary providers to deliver the full scope of specialty services required under the Plan's contract with its enrollees.
 - There are no specialties available within the Terminating Medical Group that would not be available within any of the Receiving Provider Groups.

- The Plan confirms that the Terminating Provider Group is delegated for utilization management for most professional services. Accordingly, the Terminating Provider Group is responsible for issuing authorizations. As a result, the Plan does not have direct visibility into the number of affected enrollees who have been authorized or approved to receive procedures or services from providers within the terminating provider group within 180 days of the termination date. However, the Plan has requested this information from the Terminating Provider Group and is currently awaiting their response.
- The Plan confirms that, based on the currently available hospital authorization report, there are no affected enrollees who have been authorized or approved to receive a procedure or service within 180 days of the termination date at a hospital utilized by the Terminating Provider Group but not utilized by the enrollee's receiving provider group.
- This Medical Group termination is part of a larger system- wide termination between the Plan and University of California system. However, the agreement between the Plan and the Terminating provider group is a stand-alone agreement.
